Presentation:

Building Clemson
One Foundation at a Time

Clemson University is situated on a diverse range of soil conditions that are quite unique compared to the typical Piedmont geology found in the region. In this presentation, we will explore several projects across Clemson's campus that highlight these distinctive soils along with the geotechnical engineering and construction considerations involved in serving the university's faculty, students, and alumni alike.

Leading this presentation is Jason Jansante, a senior engineer and the geotechnical group manager at Bunnell-Lammons Engineering's Upstate Branch. Jason brings extensive experience managing traditional geotechnical projects and construction management, and his dedication to the field is further demonstrated by his role as past president of the ASCE Upstate Branch.
